<i>Sustainable Canada Dialogues Scholars' Recommendations</i>	Party Actions	2019 Party Platform					
	Liberal	Liberal	New Democratic	Conservative	Green	Bloc Québécois	People's
Put a price on carbon .						N/A	
Include aggressive goals for low-carbon electricity production in federal and provincial climate action plans.						N/A	
Integrate the oil and gas production sector in climate policies.							
Adopt a multi-level energy policy with energy efficiency and cooperation in electrification at its core.							
Throughout Canada, rapidly adopt low-carbon transportation strategies.							
Integrate landscape, land use, transportation and energy infrastructure planning policies at multiple scales to ensure climate change mitigation.							
Support evolution of the building sector toward a carbon- neutral or carbon-positive sector.							
Facilitate the transition to a low-carbon sustainable society through the implementation of more participatory and open governance institutions.							
Focus on international markets for Canadian low-carbon technologies and services.							
Invest to nurture innovation in energy systems.							
Develop clean energy partnerships with Reconciliation with Indigenous peoples as a fundamental building block.							
Create an independent governance structure with a Joint Task Force, an associated, high-level cabinet committee and an independent monitoring commission.							
Ensure a just transition that considers Canadians whose livelihoods might be threatened by the low-carbon transition.							
Consider the needs of rural Canada to participate in and benefit from the low-carbon transition.
